- **Why is there a charge?**

As a registered Charity, we need to cover the cost of recycling the E-Waste to cover storage, handling, transport, sorting, recycling, and safe disposal. Some items are moved to Auckland, some elements go to landfill etc. and our costs are no different to yours.

- **Why should I recycle my E-Waste?**

E-Waste contains some valuable recoverable metals (e.g. gold, copper, steel, and aluminium) that can be recycled to make new goods, reducing demands on raw materials. It can also contain toxic materials, such as lead, phosphorus, mercury, cadmium, and brominated flame-retardant plastics. It's really important to keep these toxins out of landfill to avoid leaching into the soil or groundwater to preserve the health of our ecosystem.

- **What happens to my E-Waste?**

All E-waste is assessed to determine its suitability for repair, certification, upcycling, or recycling. Items to be recycled are dismantled by our volunteers before it is sent to local recyclers. E-Waste that cannot be processed locally is sent out of town to specialist recyclers who conform to government standards, so you can be assured that your E-waste will be processed in an environmentally responsible manner.

Some items comply with our standards for upcycling. These are checked, tested, certified, and warranted at our cost. As part of our environmental commitment and product stewardship, it can be returned free of charge at the end of the product life.
